The Family Health Organizer

18% of medical errors are due to inadequate availability of patient information. Only 5% of doctors keep patient information on a computer. Almost no emergency room can actually retrieve your critical health information.

Promoting Patient Safety Using IT (presentation) - September 22, 2004
Capitol Hill Steering Committee on TeleHealth and Healthcare Informatics
Bruce Bradley (Director, Health Care Strategy and Public Policy)

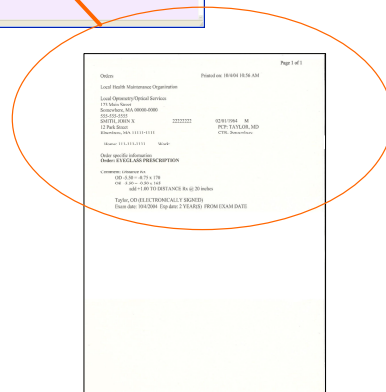

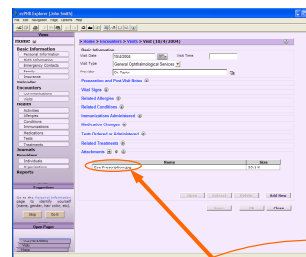

Doctors should always make medical decisions based on your complete and accurate medical data

Frequently, doctors will make decisions that impact your health, based on partial, or at worse, incorrect information.

If you are not interacting with your primary care provider, either because you moved, or are traveling or in an emergency, chances are the doctor treating you has limited access to your historical health data.

Paper-based systems, human error, incorrect memory of health events, or other circumstances may jeopardize the correctness of the data that your doctor uses.

HealthFrame™ provides you a means to consolidate all of your medical information, and place it within your reach, whenever you need it. You will be able to verify the applicability of imported medical data and you will always have it available when you interact with new providers.

*Your medical records
always within your
reach – anytime,
anywhere*

HealthFrame™ provides an easy-to-use set of tools that help you organize your medical records:

- ✓ Import copies of your medical records
- ✓ Keep journals of health related activities (jogging, dieting, etc)
- ✓ Track your medications, tests, conditions, treatments, allergies
- ✓ Prepare for doctor visits, and keep track of the medical advice

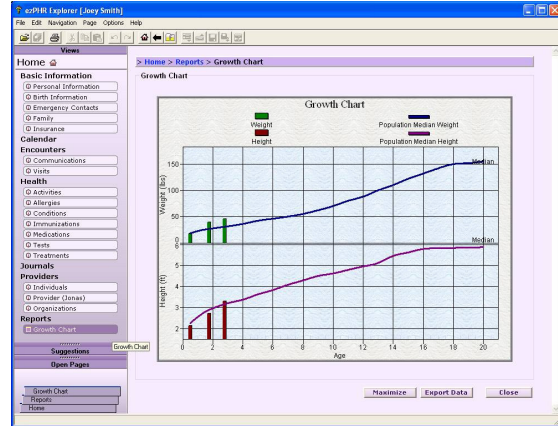

*The health information
you need; the way you
need it*

Your health information is typically reviewed by many different individuals, besides yourself: medical doctors, nurses, nutritionists, personal trainers, summer camp administrators, health insurers, employers, pharmacists, etc.

Each one of them has a different need to view a subset of your medical information. Each of them has a different depth of medical knowledge and an expected jargon.

HealthFrame™ provides a number of reports and mechanisms that empower you to make that information

available in an appropriate format, using the appropriate level of medical information and terminology.
